Ideation Phase
Empathize & Discover

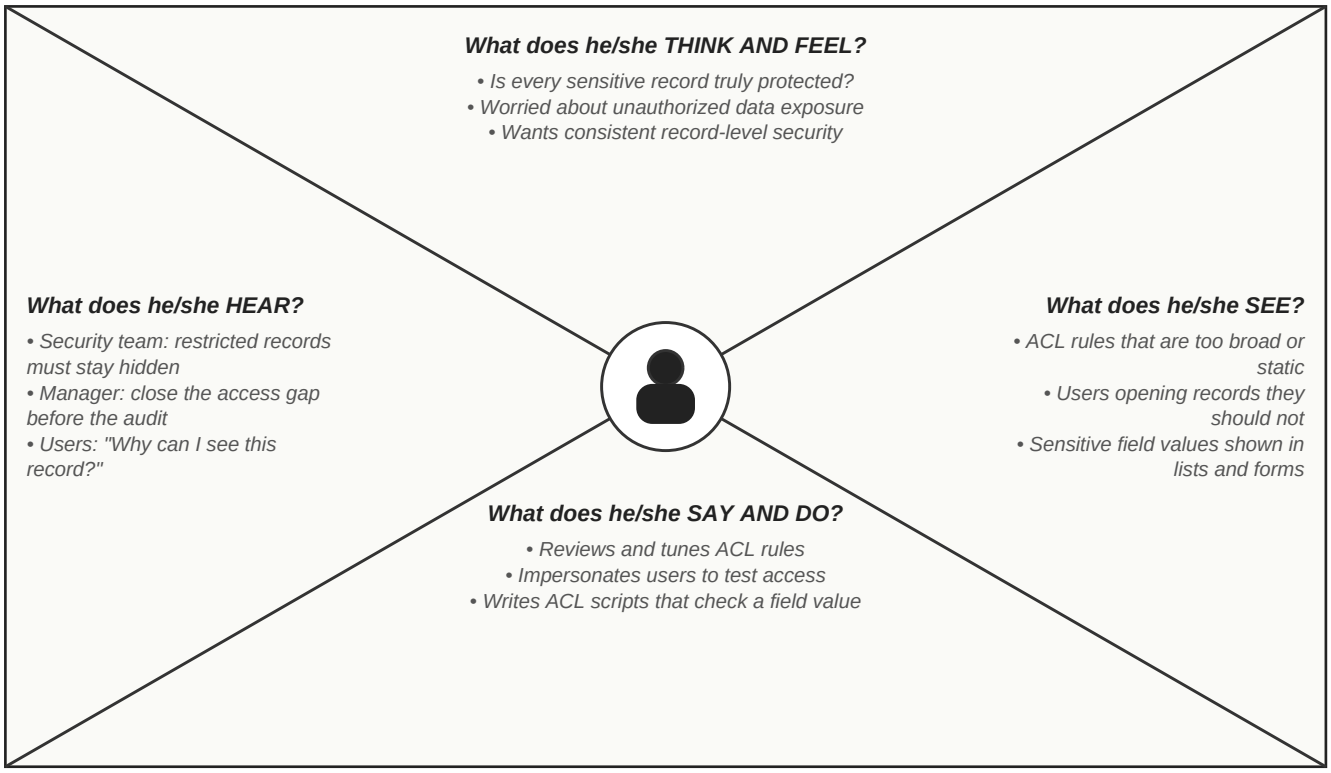
Date	02 October 2026
Team ID	SWTID-2026-9980
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. For this project, the user is a ServiceNow administrator who must protect sensitive records by controlling access through script-based ACLs that check the value of a specific field.

It is a useful tool that helps teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the administrator's perspective along with their goals and challenges.

Empathy Map: ServiceNow Administrator



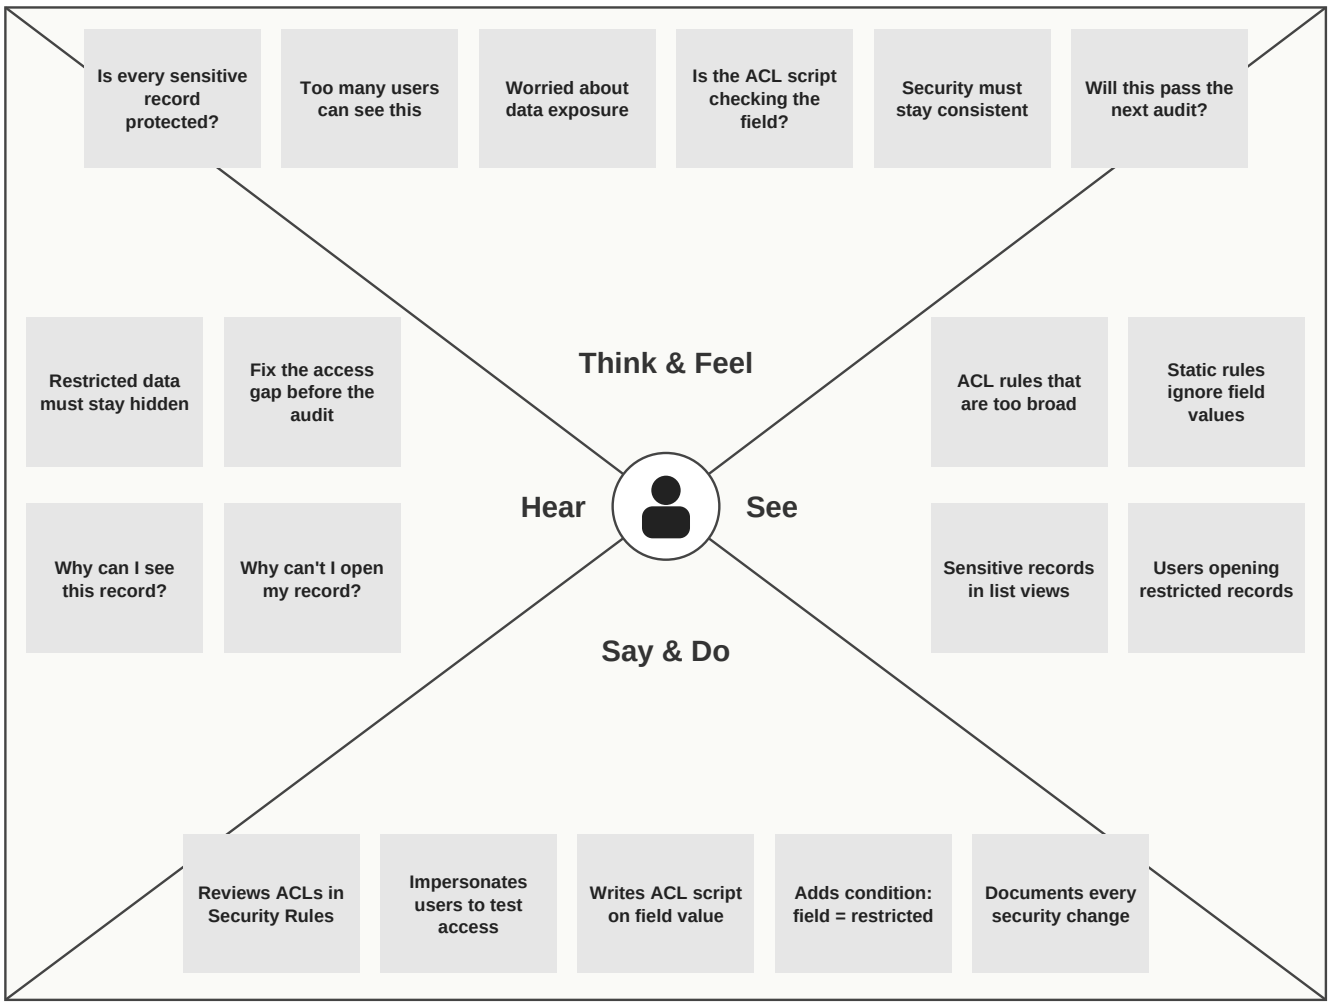
Pain

- *Fear of unauthorized data exposure*
- *Frustration with broad, static ACLs*
- *Obstacle: ACLs do not evaluate field-specific values*

Gain

- *Need: dynamic, field-based record access*
- *Success: only authorized users see restricted records*
- *Consistent, auditable record-level security*

Example: Script-Controlled ACL – Restrict Record Access Based on Field Value



Pain

- Records exposed to wrong users
- Hard to debug ACL scripts
- Inconsistent record-level security

Gain

- Only authorized users see records
- Dynamic field-based access
- Consistent, auditable security
