Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	02 October 2026
Team ID	SWTID-2026-9980
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Record Access Control	Restrict access to records based on the value of a selected field in the ServiceNow table.
FR-2	Script-Controlled ACL Validation	Use an ACL script to check the field value before allowing the requested operation.
FR-3	Role-Based Permissions	Allow authorized users with the required custom roles to view, create, edit, or delete records when the field condition is satisfied.
FR-4	Field-Value Based Restriction	Permit access to the required branch records, such as EEE branch records, and deny access when the field value does not match the configured condition.
FR-5	CRUD Operation Control	Apply the access rule to appropriate record operations such as Read, Create, Write, and Delete.
FR-6	ACL Testing and Verification	Verify that authorized users can perform permitted operations and unauthorized or non-matching records remain restricted.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The ACL configuration and field-based access rule should be simple to understand, maintain, and test by ServiceNow administrators.
NFR-2	Security	Only users who satisfy the required role and field-value conditions should be allowed to access or modify the protected records.
NFR-3	Reliability	The ACL should consistently enforce the configured access rule for every applicable record operation.

NFR-4	Performance	The script should perform the field-value validation efficiently without causing unnecessary delay during record access.
NFR-5	Availability	Access-control rules should remain available whenever the ServiceNow instance and target table are available.
NFR-6	Scalability	The solution should allow additional roles, field values, and access conditions to be added with minimal changes to the ACL configuration.
